

# DocStore in Hospitals

DocStore has been successfully used for the past 6 years in a number of well known hospitals throughout the UK for the secure storage and on demand retrieval of patient records.

## What exactly is **Docstore**?

**DocStore** is a simple, cost effective fully automated document storage and retrieval system.

Patient records are entered onto the system electronically or via scanner. The client can set up index fields according to the needs of their Clinical departments in various formats.

Typically the traditional methods of document storage and retrieval can be a very long and manual process, with high costs for Hospitals.

**Q:** Why should I be interested in talking to you about my Patient records storage and retrieval?

**A:** If your Hospital deals with hundreds of patients and patient records which are being continually and constantly updated and revised then you are almost certainly aware that this is a huge processing overhead which is both costly and inefficient.

**Q:** So how can DocStore help?

**A:** DocStore has a proven track record in a number of eminent hospitals around the UK. Our team is experienced in understanding and finding solutions to Hospital document processes and management.

DocStore has proved time and time again that it can be speedily deployed with no impact on the business and immediate results in terms of cost savings.

**Q:** How can it help if the Hospital is faced with a negligence claim?

**A:** DocStore provides a complete chronological documentary audit trail on patient treatment and clinical decision making. This can be invaluable in the assessment of response to any claim.

We can arrange an initial onsite presentation to demonstrate the benefits of the system via case studies. The company will also use a questionnaire to gain as much information as possible to gain a thorough understanding of how your process currently works.

This would achieve the following:

- Help identify any issues.
- Help to understand the scale of the problem – you may be astounded.
- Show you an alternative solution.

DocStore is a Worldmark Corporation product
